

INNOVATION MIT SYSTEM

GEALAN S 9000 plus

Stable middle sealing

Focus on security

EVOLUTION OF THE SYSTEM

S 9000 SYSTEM PLATFORM HAS BEEN DEVELOPED FURTHER

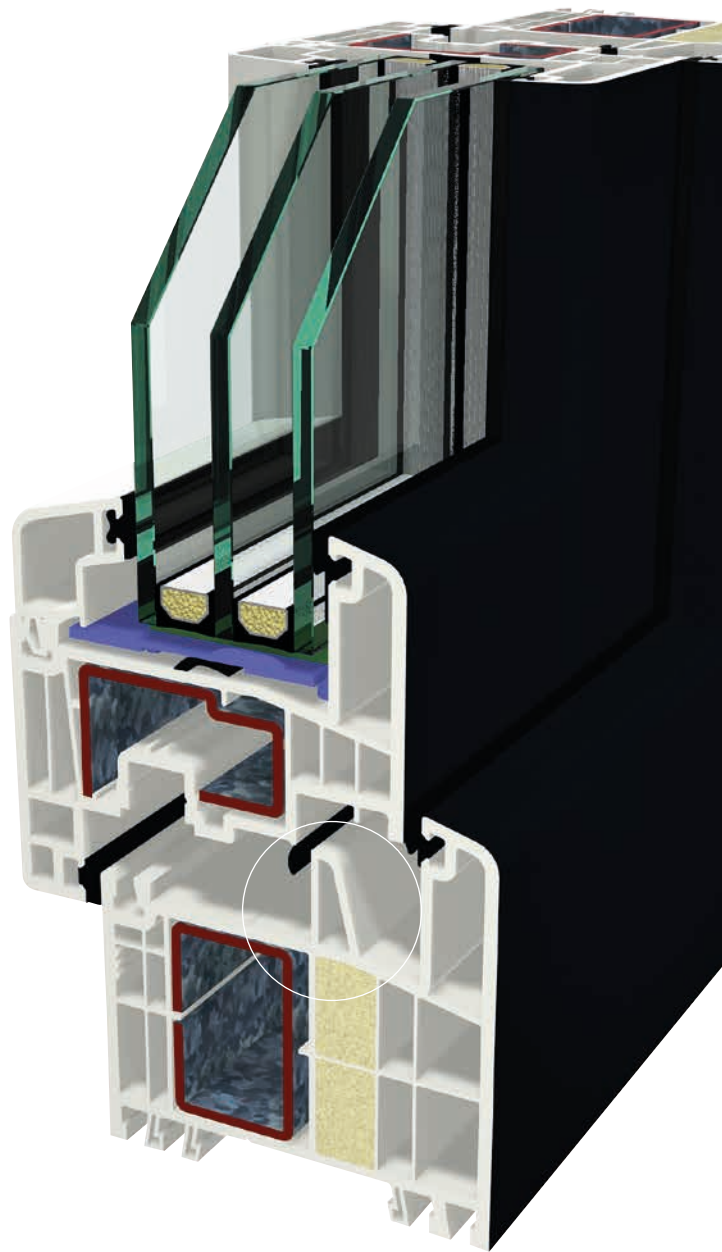

S 9000 plus

S 9000 plus is a new GEALAN middle-sealing system with a stable rib on the inner part of the window frame. The middle-sealing rib effectively protects mechanical parts of the window from external factors. Middle-sealing systems ensure heat insulation thanks to their superior properties.

Ideal for Large Coloured Elements

Excellent static properties make S 9000 plus ideal for large GEALAN-acrylcolor® coloured surface elements. The stability and security of S 9000 plus system windows can be further enhanced with the STV® adhesion technology from GEALAN.

Advantages of S 9000 plus system windows with a stable middle-sealing rib

- Security
- Easy to clean
- Individuality
- Comfort due to better heat insulation

Classic white or one of the numerous decorative films or GEALAN-acrylcolor® colours. We offer diversity. The latest overview is available on www.gealan.net

A photograph of a modern building facade featuring balconies with metal railings and vertical slat panels in a light brown color. The building has a clean, geometric design with white and brown tones. The sky is blue with light clouds.

Sustainable building envelope and
S 9000 plus system compatible with:

S 9000 front door profiles

S 9000 lift-slide doors

**S 9000 sashes, thresholds,
glazing beads**

Security barrier

Reliable Anti-Burglary Protection

Even the standard S 9000 design already has a level of security which is hard to surpass. Nevertheless, the new middle-sealing gasket of the S 9000 plus system makes life even more difficult for burglars. Most breakings are accomplished by levering out the window with a screwdriver or other tool inserted between the frame and the sash. This is exactly where a burglar is going to face an efficient barrier – the new solid gasket.

IKD®

The system is also compatible with the static dry glazing technology for greater security, and with insulation of the inner profile chamber for better heat insulation.
